Stanbrook and Nicholson's Timber Bi-Fold Doors are the flag ship product in our highly acclaimed timber door range.

Following several years of profound research and design, our Timber Bi-Fold Door sets are guaranteed to add an undisputed touch of class and elegance to any home or property.

Ensuring excellent security, our high-end timber bi-fold doors benefit from the use of multipoint espagnolette locks and security door aligners, which prevent the doors from being lifted, whilst sliding effortlessly.

A unique feature to Stanbrook and Nicholson's timber bi-fold doors, is its' flush handle operated shoot bolts, which removes the need for unsightly flush bolts on the top and bottom of the door, and therefore removes the need for you to bend down to lock each leaf.

We strongly believe that the hardware used to make these door sets is the very the best on the market, which is reflected in not only the aesthetics and security of our timber bi-fold doors, but also in their ability to slide effortlessly.

A wide range of finishes are available for our doors, with up to 200 RAL colours, including dual colours (inside and out) and opaque options. Paint colours can be matched on request, should our colour range not be suited to your requirements. We also offer an extensive range of stained finishes*.

Stanbrook & Nicholson

Timber Entrance Door

Stanbrook & Nicholson specialises in manufacturing premium quality, bespoke solid timber doors, which can seamlessly integrate with any architectural environment - contemporary, classic or period.

Any door constructed from timber will have a unique look and feel. But, where better to utilise this special material than the gateway to your home?

We can implement an array of styles, subject to your specific requirements, making this a truly bespoke product.

Furthermore, at Stanbrook & Nicholson we cram in as much cutting-edge technology as possible into our products. Multi-point locking systems as standard, will enhance the natural durability of your bespoke timber door, while the latest advancements in energy saving glass will save you money. Witness your carbon footprint shrink and enjoy a more comfortable home with warm edge spacer bars, argon gas filled units and Planitherm.

As with all of our products at Stanbrook & Nicholson, our timber entrance doors come with a range of optional colours, finishes and accessories. Be spoilt for choice as you browse our 200 RAL colour options* that make replacements as easy as fresh installations. Choose from a range of finishes too, including matte, gloss, satin and – our most recent addition – a highly realistic wood finish.

Stanbrook & Nicholson

Timber Stormproof Window

Stanbrook and Nicholson's popular Timber Stormproof Windows boast a system which is packed full of innovations - innovations that bring the benefits of security, warmth, warp resistance, weathering and modern glazing performance.

Our master craftsmen work to a relatively new design, in that the original timber stormproof window can be traced back to the early 1950's. Our contemporary design, where the casement lips over the frame, provides a very high-level of weather protection.

We have designed the outer frame of our stormproof window to be of a similar thickness to that of a PVCu window. This therefore reassures our clients who wish to replace their windows with timber, that our windows will fit in with minimal disruption to their property.

Stormproof windows for renovations new builds

Fitted to new and old properties alike, these stormproof windows are one of our most popular types of window.

Stanbrook & Nicholson

Flush Timber Window Range

Stanbrook and Nicholson manufacture a bespoke range of Flush Timber Windows. Whether you own a listed property, you're seeking replacement windows for your home or you're simply purchasing them for a new build, we have the right specification available to suit your very needs.

Boasting a smart and well finished design, Stanbrook & Nicholson's flush timber windows are one of our most popular products, appositely complimenting any home or property.

Traditional Flush

Casements are swung on Butt hinges and we use a more traditional casement fastener and peg stay. The sightlines are reduced on this type of window and therefore this window is more suitable for period properties.

Modern Flush

The casements on this window are fitted using friction hinges and feature multipoint locking as standard. The added security of this window is popular as there is no difference in cost over our traditional window.

Contemporary Flush

These flush windows are our latest development in the Stanbrook & Nicholson Flush Timber Window range. Using an intelligent pivot system, this window has easily removable side swung casements for ease of fitting. There is no need for a traditional peg stay as the sash can be locked in the open position using the handle.

*See our company brochure for more information on colours, finishes and guarantees

APPLICATION

Timber Roof Lanterns

Created by our expert craftsmen, Stanbrook and Nicholson's Timber Roof Lanterns are a unique hallmark of unparalleled architecture, undoubtedly guaranteed to add great value and ambience to your property or home.

With such an aesthetically beautiful material as timber, being combined with such a luxurious structure as our handcrafted roof lanterns, the end results are simply stunning.

Furthermore, another benefit of choosing a Stanbrook & Nicholson timber roof lantern, is that when purchasing this alongside your other joinery products, the look, feel and finish of your project will match perfectly.

Timber roof lanterns can be moulded into the same design as your wooden windows and doors, therefore maintaining the elegant design flowing consistently throughout your property.

*Please see our company brochure for more information on colours, finishes and guarantees

APPLICATION

Domestic roof situations

KEY FEATURES

Profiles have the option of either ovolo, chamfered or lambs tongue.

Available in a choice of micro porous finishes in stain or opaque colours

Solid paint colours can last up to 10 years before recoating *

Corner posts, sills and ring beams interface together using a unique gasket system which requires minimal screws and a silicone free installation.

The hand crafted centre boss's provide a traditional centre piece to every hip section.

All timber roof lantern components clip together, providing an easy fit and screw-less system.

Ring beams and Eaves beams are designed in a range of sizes to allow easy installation onto standard 'up stand' openings.
